

BOTTLING

- ▶ The bottling sector's requirements in terms of mechanical strength and sliding speed are met by the production of stars, augers, pinions and guides made of PE, POM and PTFE, which, thanks to their low coefficient of friction and high mechanical resistance, help to reduce noise system and increase the speed sliding of the bottles.

▶ **PP • PMMA • PEEK • PE • PP • PTFE • PVC • POM**

▶ APPLICATIONS

STARS, AUGERS, GUIDES, STRUCTURAL COMPONENTS, GEARS

▶ ADVANTAGES

REDUCTION OF NOISE AND VIBRATIONS
HIGH TRANSPORT STABILITY
REDUCTION OF THE MAINTENANCE COSTS
RESISTANCE TO WEAR AND CORROSION
EXCELLENT SLIDING PROPERTIES
