

WATER TREATMENT

- The needs of the water treatment sector in terms of reaction to both high and low temperatures as well as chemicals are met by engineering plastics.
- When it comes to handling fluids, engineering plastics are an excellent material as they can work at both high and low temperatures and are immune to the chemicals action.
- Tecno Plastic Engineering has been involved in the production of pistons and various internal pump components for years.

► PP • PEEK • POM • PE • PP • PTFE • PVC

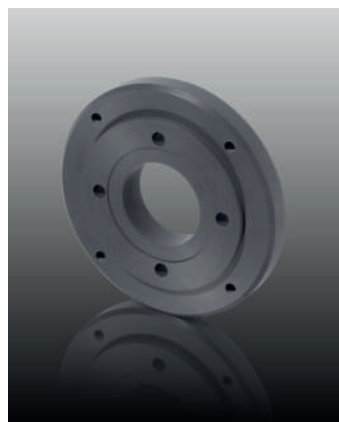

► APPLICATIONS

VALVE BODIES, PISTONS, BEARING, BALLS, STRUCTURAL COMPONENTS

► ADVANTAGES

HIGH RESISTANCE TO CHEMICALS AND ATMOSPHERIC AGENTS
HIGH RESISTANCE TO WEAR AND ABRASION
WEIGHT REDUCTION
REDUCTION OF THE MAINTENANCE COSTS
SUITABILITY FOR CONTACT WITH DRINKING WATER
